

Alaska Electric Light and Power, the electric utility serving all electric customers in the Juneau area, files this motion to intervene in docket P-13563. We also request to be included on the mailing list for communications related to this docket. The e-mail address that should be used is scott.willis@aelp.com

We also file this comment based on the Preliminary Permit Application.

The Project anticipates an eight-mile long transmission line connecting to an existing 138 kV transmission line. Portions of the existing line do not have adequate capacity to carry this additional power. The Engineering Feasibility studies mentioned in the Application should also include investigation of additional transmission capacity for the existing line.
