Re: Sweetheart Lake Hydroelectric Project-Preliminary Permit Application clarification P-13563

Dear Ms. Bose:

On December 3, 2012, our successive Preliminary Permit Application was received by the FERC. Our successive Preliminary Permit contained up to date information that has resulted from many studies of man hours and resources consisting of hundreds of thousands of dollars.

However, we inadvertently used some draft numbers in our application, while not material in the determination of whether we should be granted a successive permit, should be clarified.

On page 10 under (2) Reservoir of our successive preliminary permit application we state:
The project would permanently increase the lake elevation by 25 feet and the project operation would fluctuate the surface elevation of the new impounded reservoir about 80 feet annually.

This sentence should read:

The project would permanently increase the lake elevation by 25 feet and the project operation would fluctuate the surface elevation of the new impounded reservoir about **60** feet annually. {emphasis added}

On page 11 under (2) Reservoir of our successive preliminary permit application we state:

- Active storage capacity 97,800 acre-feet

This bullet point should read:

- Active storage capacity **94,069** acre feet {emphasis added}

Thank you for the opportunity to clarify these figures in our successive preliminary permit application. If you have any question regarding this matter, please do not hesitate in contacting me at (907) 789-2775.

Respectfully submitted,
