

I urge your support of project P-13563. The developers of the project have been diligent in reaching out to the community to build support, and have been particularly sensitive to environmental considerations including the proposed location of the powerhouse inside the mountain, no roaded access and the introduction of increased sockeye salmon stock to a popular fishing area. Our region is rich in water resources which due to our terrain have limited environmental impacts. While we continue to develop hydroelectric resources, we still rely heavily on diesel generation to fulfill our community power needs.

The Alaska State Legislature has implemented policy goals to reach 50% power generation via alternative energy sources by 2035. Juneau Hydropower is committed to helping Alaska achieve that goal. Sincerely, Cathy Munoz
